

Technical Machine Training

For Operators, Users, Service & Maintenance

Our service does not end with the installation of the machine in your company, because we are convinced that the professional operation, service and maintenance of our cleaning machines will increase their lifetime significantly. Therefore, we offer technical training courses for every machine type and level of knowledge, which also show how the respective system and its range of services can be optimally used.

- If there is a new need for training on your machine, we would be happy to offer you individually tailored training seminars meeting your specific needs. Ideally, these take place on the existing system. In this way, the handling and operation of your own Ecoclean cleaning system is learned, refreshed or expanded depending on the previous knowledge of the participants.

ACADEMY

Training | Consulting
Analysis | Optimization

Operator and User Training

Machine operators are enabled to operate the cleaning system independently and responsibly, as well as to recognize and to solve minor malfunctions. You learn how to carry out daily maintenance and cleaning work and receive tips for a trouble-free operation.

Content

- Knowledge of the functionality and the structure of the machine/s
- Knowledge of how to operate the machine/s
- Knowledge of the properties of the cleaning media used
- Knowledge of how to use the media safely
- Knowledge of the safety guidelines to be observed
- Knowledge of how to use the operating manual and spare parts list
- Knowledge of how to deal with the process and circuit diagram
- Small maintenance and care work on the system according to the operating manual

Dates/Price/Duration: upon request

Service and Maintenance Training

Participants are made familiar with the operation and functionality of the machine, they learn to interpret error messages correctly and to take necessary measures. You learn how daily maintenance and cleaning work must be carried out and tips are given to ensure that the system is as trouble-free as possible in operation. After the training, you can carry out smaller repairs yourself and thus costs for service calls can be minimized.

Content in addition to operator and user training (see above):

- Detailed knowledge of the functionality and the processes in cleaning systems
- Detailed knowledge of the structure of the system components
- Knowledge of leak tests on standard systems
- Knowledge of the care and maintenance of the system by the customer in accordance with the specifications in the operating manual
- Schematic troubleshooting

Dates/Price/Duration: upon request
